

Eigen Things

If $A \in \mathbb{R}^{n \times n}$, and there is a $\vec{v} \neq 0 \in \mathbb{R}^n$, and

$$A\vec{v} = \lambda\vec{v}$$

Then \vec{v} is an **eigenvectors** for A , and λ is the **eigenvalue**.

Eigenspaces

The span of the eigenvector of A is the eigenspace of A . It spans a subspace of \mathbb{R}^n called the λ -eigenspace of A .

The λ -eigenspace of A is $\text{Nul}(A - \lambda I)$

$$\begin{aligned} A\vec{v} &= \lambda\vec{v} \\ A\vec{v} - \lambda\vec{v} &= 0 \\ (A - \lambda I)\vec{v} &= 0 \end{aligned}$$

Theorems

- The diagonal elements of a triangular matrix are its eigenvalues.
- A not invertible $0 \iff$ is an eigenvalue of A .
- Stochastic matrices have an eigenvalue equal to 1.
- Eigenvectors with distinct eigenvalues are linearly independent vectors.
