Deviation

This is closely related to **Least Squares**

The red lines are the deviation/error/residuals in approximation.

We were finding an \hat{x} to minimize $||A\hat{x}-b||$. This is the same thing as minimizing $||A\hat{x}-b||^2$. Now, over all \hat{x} ,

$$||A\hat{x}-b||^2=||r||^2=\sum_{i=1}^n r_i^2$$

So basically we are trying to minimize the square of the residual.
