Dot Products and Length

Dot products are done like so,

$$ec{u}\cdotec{v}=ec{u}^Tec{v}=[u_1\quad u_2\quad \cdots\quad u_n]egin{bmatrix} v_1\v_2\ dots\v_n \end{bmatrix}=u_1v_1+u_2v_2+\cdots+u_nv_n$$

Properties

$$(ec{v}+ec{w})\cdotec{u}=ec{v}\cdotec{u}+ec{w}\cdotec{u}$$

$$(c\vec{v})\cdot\vec{u}=c(\vec{v}\cdot\vec{u})$$

$$ec{v}\cdotec{u}=ec{u}\cdotec{v}$$

$$\vec{u} \cdot \vec{u} > 0$$

$$\vec{u} \cdot \vec{u} = 0 \iff \vec{u} = 0$$

Length

$$||ec{u}|| = \sqrt{ec{u} \cdot ec{u}}$$

Properties

$$||cec{v}|||=|c|\cdot||ec{v}||$$

Theorem

 $\overrightarrow{a} \cdot \overrightarrow{b} = ||\overrightarrow{a}|| \, ||\overrightarrow{b}|| \, \cos \theta$. Thus, if $\overrightarrow{a} \cdot \overrightarrow{b} = 0$, then: • \overrightarrow{a} and/or \overrightarrow{b} are zero vectors, or • \overrightarrow{a} are \overrightarrow{b} are perpendicular to each other.
